

Block Description

| Description | variable | inches | |
|--------------------------------|----------|------------|----------|
| Width across front | Wf | 8-3/8 | 8.375 |
| Width across middle | Wm | 11-1/2 | 11.5 |
| Width across back | Wb | 5 | 9 |
| Depth to middle | Dm | 6 | 6 |
| Depth to back | Db | 9 | 9 |
| Depth to lip | DI | 1 | 1 |
| Width across lip (dashed line) | Wl | calcutated | 8.895833 |
| Thickness(height) | t | 4 | 4 |

Note: The author suspects that these dimensions are slightly in error. See the calculations below

The following calculations are done to consider to consider the blocks placed in a ring with with no gaps between P3 and P4 and P1 and P2 (Figure 5).

The author suspects that β and δ should be 30 degrees rather than 29.19 degrees. That is rather minor, but leaves one to wonder when cumulative error would be significant.

$$R_1 = D_m W_f / (W_m - W_f)$$

$(W_f/2)/(R_1) = (W_m/2)/(R_1 + D_m)$ ratio of parts of similar triangles are proportional

$$W_f(R_1) = W_m/(R_1 + D_m)$$

$$(R_1 + D_m)W_f = (R_1)W_m$$

$$R_1 W_f + D_m W_f = R_1 W_m$$

$$D_m W_f = R_1 W_m - R_1 W_f$$

$$D_m W_f = R_1 (W_m - W_f)$$

$$D_m W_f / (W_m - W_f) = R_1$$

$$R_1 = D_m W_f / (W_m - W_f)$$

$$\beta = 2 * \arctan(W_f / (2 * R_1)) \quad (\text{Eqn 1: Landscape Block Circle Algorithm : Equations 1 to 4})$$

$$\delta = 2 * \arctan(W_m / (2 * (R_1 + D_m))) \quad (\text{Eqn 2: Landscape Block Circle Algorithm : Equations 1 to 4})$$

)

$$W_l = W_f (R_1 + D_l) / (R_1)$$

$(W_f/2)/(R_1) = (W_l/2)/(R_1 + D_l)$ ratio of parts of similar triangles are proportional

$$W_f(R_1) = W_l/(R_1 + D_l)$$

$$W_f(R_1 + D_l)/(R_1) = W_l$$

$$W_l = W_f (R_1 + D_l) / (R_1)$$

Figure 3

Dimensions slightly wrong to get these results?
